Subject: Omega Chemical Superfund Site Remedial Investigation
Request for Site Access

Dear Mr. Trepanier:

The Environmental Protection Agency (EPA) is investigating the distribution of chemical contaminants in soil gas and groundwater (primarily volatile organic compounds) as part of the Omega Chemical Superfund site (Omega) remedial investigation and feasibility study (RI/FS). The Omega facility is a former refrigerant/solvent recycling operation located at 12504 and 12512 Whittier Blvd, Whittier, CA. EPA's environmental consultant, CH2M HILL, is going to drill soil borings at several locations in the City of Santa Fe Springs.

CH2M HILL may require access to your property, located at 11862 Burke Street, to drill up to two (2) soil borings in November or December 2006. It is anticipated that the drilling contractor will require site access for approximately one (1) working day. Impacts to your normal business operations will be minimal and the site will be restored as close as possible to its original condition prior to demobilization. CH2M HILL will contact you as soon as possible to arrange a site visit to coordinate site access and logistics, and to discuss any additional terms or requirements that you may have.

Your cooperation with this important investigation would be greatly appreciated.

Feel free to contact me at (213) 228-8271 if you have any questions or concerns. The EPA Project Manager, Christopher Lichens, can be reached at (415) 972-3149.
